### **CLASE MARTES-29-JUNIO-2021**

#### **INICIO DE CLASE-**

Pasar valores o parámetros a otra activity. Entonces, primero realizar la interfaz de la Main Activity y la Main Activity 2.

Declaramos el componente edit Text, private EditText edit1; Luego hacemos la referencia dentro del método oncreate edit1=findViewById(R.id.editnombre); Ahora programaremos el botón Enviar. Crearemos un objeto de la clase Intent Intent i= y llamamos al constructor =new Intent el cual tendrá dos parámetros (packageContext: this, MainActivity2.class); Luego utilizaremos el método i.putExtra(name: "nombre", edit1.getText().toString()); que permitirá pasar valores a otra activity.

Así queda nuestra MainActivity.java

```

```

#### Así queda la mía,

```
package com.example.pasarinfoentreactivities;

import ...

public class MainActivity extends AppCompatActivity {

private EditText edit1;

doverride
protected void onCreate(Bundle savedInstanceState) {
 super.onCreate(savedInstanceState);
 setContentView(R.layout.activity_main);
 edit1=findViewById(R.id.editnombre);

public void enviar(View v) {
 Intent i=new Intent( packageContext this, MainActivity2.class);
 i.putExtra( name: "nombre", edit1.getText().toString());
 startActivity(i);
}
```

## Ahora vamos a nuestra Activity2

                                 }
                     28
                      29
```

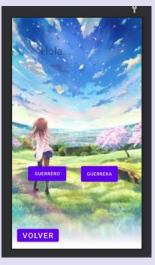

# Y nos quedaría algo así

### 1) Realizar app con varias activities, y traspaso de información.

```
public class MainActivity extends AppCompatActivity {
                                                              A ver a ver, qué
    private EditText edit1;
                                                             pasó? Los botones
                                                            hacia mis personajes
    @Override
                                                             no funcionan 🖂
    protected void onCreate(Bundle savedInstanceState) {
                                                            pero el traspaso de
        super.onCreate(savedInstanceState);
                                                             información entre
        setContentView(R.layout.activity_main);
                                                               activities sí...
        edit1=findViewById(R.id.editnombre);
    public void enviar(View v) {
        Intent i=new Intent( packageContext: this, MainActivity2.class);
        i.putExtra( name: "nombre", edit1.getText().toString());
        startActivity(i);
    public void pj1(View v) {
        Intent i= new Intent( packageContext: this, MainActivity3.class);
        startActivity(i);
    public void pj2(View v) {
        Intent i= new Intent( packageContext: this, MainActivity4.class);
        startActivity(i);
```
